

## **COMPETITIVE ANALYSIS**

To find out how already existing cooking apps works, we install and analyse the following app:

- GialloZafferano
- Cookpad
- Fatto in casa da Benedetta
- FOOPY

We focus on understanding common actions and usage flows, as well as weaknesses of each app to avoid them.

## **USE CASES**

### **-Use cases 1: User Authentication and Profiles**

- User registration
- User login
- User logout
- User Profile management

### **-Use cases 2: Managing Recipe**

- Create a recipe
- Delete a recipe
- Modify a recipe
- Import/duplicate a recipe
- Search for a recipe
- Filter (ingredients, cost, difficulty and cooking time) recipes
- Save recipes created by others in a list
- Create new list

### **-Use cases 3: Review and keep track of tried recipes**

- Publish review of a cooked recipe with photos and tips
- Keep track of the recipes executed by marking them as cooked and putting them in the executed list

### **-Use cases 4: Notifications**

- Receive a notification when someone duplicates your recipe
- Visualize recommended recipes based on profile's preferences
- Receive a notification when someone write a review of your recipe

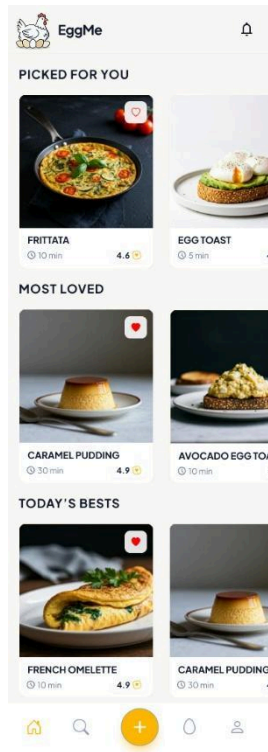

### **-Extensions:**

- Discover ethical local farms and visualize them on a map
- Recalculate ingredient quantity

# INFORMATION ARCHITECTURE

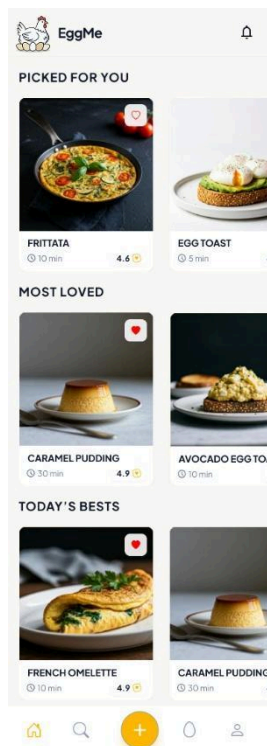

These are the architectures we have decided to use for our app:

## Tabbed view

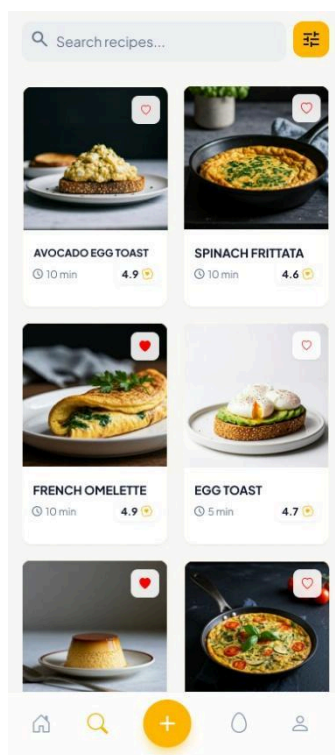

We have a fixed toolbar at the bottom of the screen with icons for Home, Search, Create Recipe, Your Impact, and Profile. Users can easily switch between the main sections using the toolbar, which is accessible from every screen. This toolbar is the main structure of the app to separate the main features.

## Hub and spoke

Users start on the main recipe list, where all recipes are displayed with an image and name. Clicking on a recipe opens the recipe page with its details. To view another recipe, users must go back to the main list and select a different one. (The user starts from a central hub (the lists of recipes) and navigates to spokes (specific recipes)).

## Filtered and matric view

On this page, users can search for a recipe or apply filters to narrow down the list of recipes. Only recipes that match the search term or filter criteria are displayed. This allows users to easily find the recipes they are looking for.

# COLOR PALETTE

The main colors of our app are various shades of orange and white, chosen to evoke the tones of egg whites and yolks, in harmony with the theme of our egg-based app.
