

STRATEGY

Create a platform dedicated to vegetarians who love cooking with eggs, where users can discover, create, and share recipes while connecting with each other. At the same time, the app promotes an ethical and sustainable approach by helping users find local farmers, support hen welfare, and make more conscious choices.

PERSONAS

Target audience: The app is for vegetarians and aspiring vegetarians who enjoy cooking with eggs. It serves cooks of all levels, from beginners looking for simple recipes to experienced users experimenting with new ideas.

Sara – Aspiring Vegetarian

She wants to eliminate meat and is looking for simple egg-based recipes to make the transition easier.

Marco – Vegetarian Student

He lives alone and wants quick, varied, and affordable meals with easy-to-follow recipes.

Luca – Vegetarian Cooking Enthusiast

He loves cooking and experimenting with egg-based vegetarian recipes, seeking new ideas, original combinations, and ways to improve his cooking skills.

Maria - Ethical chef

A professional chef that wants to share her recipes and receives feedback from other users. She is interested in animal wellbeing and she's interested in finding ethical farmers.

EXTENSION:

- **Ethics Eggs** is a feature of the app that helps you find “ethical” chicken farmers near you.

With this feature, you can:

- Discover local farms: using a map-based system, you can find nearby farms where hens are raised with higher animal welfare standards, such as free-range or organic farming.
- Visit the CIWF website with a button to learn more about hen welfare.
- Adopt a hen through a dedicated button.

This feature allows you to support ethical farmers, promote animal welfare, and choose more responsible food.

- **Ingredient Quantity Recalculation Feature** : allows users to automatically adjust the amount of ingredients in a recipe based on the desired number of servings. When a user publishes a recipe, they specify the original number of servings for which the

recipe was designed . If another user wants to prepare the same recipe for a different number of people, they can simply enter the desired number of servings, and the app will automatically recalculate the required ingredient quantities.

This feature helps users avoid manual calculations and reduces the risk of mistakes when scaling recipes.
